STRATACACHE Announces New Release of OmniCast 4.0 Content Distribution Software

Globally-Operated "Distribution Engine" Getting an Upgrade

February 13, 2008— [STRATACACHE](#) recently announced the upcoming release of OmniCast 4.0, an updated version of the award-winning, world's most widely used enterprise content distribution software. As the trusted solution of choice for some of the world's largest enterprises, the 4.0 release now provides many new features and functions that enhance the usability, performance, and security of the product. [OmniCast](#) 4.0 will be available worldwide March 1, 2008.

The same highly advanced one-to-many distribution system now has even higher bandwidth capabilities for sending the largest files over networks of any speed. Files of any size can be sent over any network simultaneously to all locations, and users can be confident that every bit has been successfully delivered.

OmniCast 4.0 is built with a totally new secure web interface. An industrial strength SQL database further improves and optimizes performance, reporting and extensibility. OmniCast 4.0 extends network bandwidth control to easily guarantee that content distribution usage is metered by time of day, day of the week and remote site.

STRATACACHE OmniCast reliably distributes data, software, and video files simultaneously and cost-effectively to hundreds of thousands of branch facilities and edge sites. OmniCast offers proven scalability that enables it to distribute files to as many as 100,000 endpoints from a single server. It works in satellite, WAN, and wireless environments and leverages STRATACACHE's award-winning [OmniCast](#) content delivery engine for reliable multicast delivery.

STRATACACHE continues to update its OmniCast software in response to customer demand and the company's ongoing determination to remain at the forefront of content distribution technology.

"OmniCast 4.0 is ideal for any enterprise, carrier or media provider looking to move large files over networks of any bandwidth and reliability profile. It represents a major advancement in state-of-the-art, one-to-many content distribution," says Steve Bannister, STRATACACHE VP of Engineering. "Improvements in scalability, manageability and reliability based on feedback from some of the world's largest organizations with the world's largest networks make content distribution more hassle-free than ever before. The new progressive web and SQL architecture will allow us to maintain and extend this product's value for many years."

OmniCast can be purchased as a customer-deployed solution, through a software as a service (SAAS) arrangement, or as a managed service via STRATACACHE or partners worldwide.
